

Manual

The main page includes two tabs: one for creating a **New Order** and another tab **My Orders** – it's the list of client's orders.

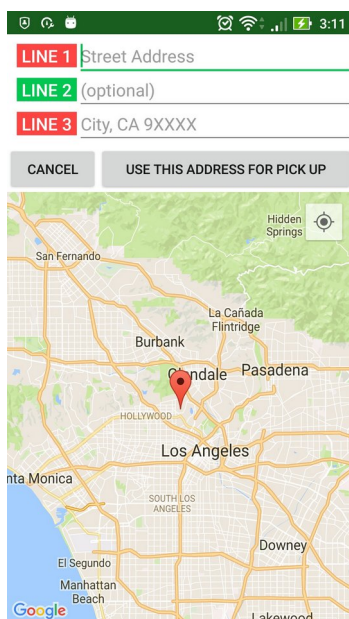

New Order Tab

My Orders Tab

A Client may fill the Address fields by click on **Map** or manually.

If a Client created an Order, the app saves his Address and he may easy fill the form by clicking on the **Recent** button. It doesn't need to use map or fill form again for this Address.

ASAP button sets the pick-up time to As Soon As Possible. If a Client wants to determine the Date and Time by more flexible way, he may use **Set Date and Time** button, which shows a dialog with dates and times.

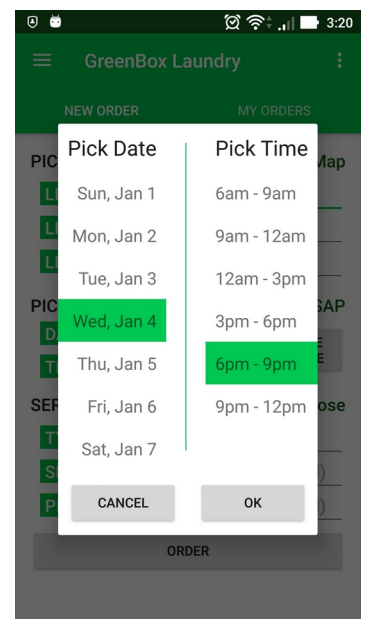

Map Activity

The Map activity provides useful interface which allows pick the Address by **click on Map** (the app detects address by coordinates) or by clicking on **My Location** button which uses **GPS** to find an Address.

My Orders tab shows the Client orders, their status and other info. **Cancel** button works, **View Details** button is not implemented yet.

There are **Settings** button on the right top corner and **Navigation** button on the left top. They don't do anything for the present, but are prototypes for future use.

Set Date and Time Dialog
